Overview

Elmos Semiconductor AG

Evaluation Support Plattform

- ELMOS calibration support hardware:
 - SSP2 (programmer for all 520.4x sensor signal conditioners)
 - SSP2 multiplexer extension board (extension for multiple sensor calibration features)
 - 520.4x application circuit board (individual hardware including 520.47 SSP + external components)
 - SSP3 (programmer for all 703.x1 sensor signal conditioners)
 - 70311 interface board
 - 703.21 interface board
 - 703.x1 application circuit board (individual hardware including 703.x1 SSP + external components)
 - Emulation board (potentiometer for setup verification and training)

- PC- calibration software development requirements:
 - Windows 10 (Windows 7)
 - Microsoft .NET framework V4.0 or newer
 - FTDI - USB to UART driver
 - Microsoft visual C++ redistribution packages visual studio 2015 or newer

- Provided engineering support:
 - 703.x1, 520.47, 520.42: PC-tool as executable file
 - Used for initial engineering tasks (configuration definition, prototype calibration)
 - API : Calibration support DLL's
 - Integration of ELMOS API into custom production calibration software

General Description

Evaluation Support Plattform

- Documentation:
 - hardware description
 - Schematics , Layout
 - Software description
 - GUI , API
 - Bootloader
 - Code examples for calibration and configuration
 - communication, Calibration
 - Setup files
 - Device Configuration
 - Software configuration
 - Firmware

General Description

- **Evaluation Kit Content:**
Order Code: K70311-0001 (complete kit)
 - 1x SSP3 Board
 - 1x Interface Board
 - 3x Application Circuit Board
 - 1x Sensor Emulator (span 25mV/V)
 - USB-stick, USB-Cable, 10-wire cable
- **SSP3 Board**
Order Code: Z00000-0015
- **Interface Board**
Order Code: K70311-0003
- **Application Circuit Board**
Order Code: K70311-0004
- **Sensor Emulator (span 25mV/V)**
Order Code: K70311-0005

Content of the Evaluation Kit

Evaluation Kit – E703.11: Hardware Components

SSP3 Board

Computer to signal conditioner communication interface:

- USB based (virtual com port)
- 1-Wire (SIO), I²C and SPI output supported

Interface Board

Programmer interface for the E703.11:

- Connection to application circuit board and external 5V power supply option

Application Circuit Board

Carrier PCB for the E703.11:

- Supports initial prototype and configuration tests with custom pressure sensing elements

■ MassCal Kit Content:

Order Code: K70311-0002 (complete kit)

- 1x SSP3 Board
- 1x Supply Circuit Board
- 1x Multiplex Circuit Board
- 20-wire connection cable (Supply -> Mux)
- 2-wire ribbon cable (Supply -> Mux)
- 2x connector cable multiplex circuit board (no customer interface board included)
- USB cable , USB stick

■ SSP3 Board : Order Code: Z00000-0015

■ Supply Circuit Board: Order Code: K70311-0007 (cb2mc1w)

■ Multiplex Circuit Board: Order Code: K70311-0006 (mchub1w)

- including connection cable set (4 cables in total)

Content of the Evaluation Kit

Multi-Sensor Calibration – E703.11: Hardware Components

SSP3 Board

Computer to signal conditioner communication interface:

- USB based (virtual com port)
- 0-wire, 1-Wire (SIO), I²C
 - Remove JP1 and JP2

Supply Circuit Board

Supply board for the E703.11:

- Supports supply for up to 4 multiplexer boards, each line can connect to max 64 sensor modules
- Supply:
 - 12V
 - min 350mA, depends on setup

Multiplex Circuit Board

Channel multiplexer for E70311:

- Supports connection to 64 sensor modules at 4 different sites , each site supports 16 channels

Evaluation Kit – E703.21

- Evaluation Kit Content:

Order Code: K70321-0001 (complete kit)

- 1x SSP3 Board
- 1x Interface Board
- 6x Application Circuit Board (2 of each type)
- 2x Sensor Emulator (span 25mV/V)
- USB-stick, USB-Cable, 10-wire cable

- SSP3 Board

Order Code: Z00000-0015

- Interface Board

Order Code: K70321-0003 (application),
K70321-00011 (buffer, optional)

- Application Circuit Board

Order Code: K70321-0004 (4-20mA), K70321-0005 (0-10V regulated),
K70321-0009 (5V ratiometric)

- Sensor Emulator (span 25mV/V)

Order Code: K70321-0006

Content of the Evaluation Kit

Evaluation Kit – E703.21: Hardware Components

SSP3 Board

Computer to signal conditioner communication interface:

- USB based (virtual com port)
- 0-wire, 1-Wire (SIO), I²C and SPI output supported

Interface Board

Programmer interface for the E703.21:

- Connection to application circuit board. Supports high voltage supply and current loop function of 703.21 application

Application Circuit Board

Carrier PCB for the E703.21:

- Supports initial prototype and configuration tests with custom pressure sensing elements. Three different application boards:
 - current-loop 4 -20mA
 - 5V radiometric output
 - regulated voltage 0-10V

- **MassCal Kit Content:**

Order Code: K70321-0002 (complete kit)

- 1x SSP3 Board
- 1x Supply Circuit Board
- 1x Multiplex Circuit Board
- 20-wire connection cable (Supply -> Mux)
- 2-wire ribbon cable (Supply -> Mux)
- 2x connector cable multiplex circuit board
 - (Mux -> customer interface board, no interface board included)
- USB cable , USB stick

- **SSP3 Board:** Order Code: Z00000-0015

- **Supply Circuit Board:** Order Code: K70321-0008 (cb2mc1w)

- **Multiplex Circuit Board:** Order Code: K70321-0007 (mchub1w)
 - including connection cable set (4 cables in total)

Content of the Evaluation Kit

Multi Sensor Calibration – E703.21: Hardware Components

SSP3 Board

Computer to signal conditioner communication interface:

- USB based (virtual com port)
- 0-wire, 1-Wire (SIO), I²C
 - Remove JP1 and JP2

Supply circuit Board

Supply board for the E703.21:

- Supports supply for up to 4 multiplexer boards, each line can connect to max 64 sensor modules
- Supply:
 - Input : max 30V , (1.2 A - setup dependent)
 - Input: max 8V (500mA)
 - 4x Device supply output: 24V or 5V regulated
 - Board supply output : 5V regulated

Multiplex Circuit Board

Channel multiplex board the E703.21:

- Supports connection to 64 sensor modules at 4 different sites , each site supports 16 channels

Multi Sensor Calibration – E703.x1: Hardware Components

multiplex board E703.11:

multiplex board E703.21:

ELMOS Customer interface board 703x1

Interface PCB used at ELMOS to connect 16 x 703.x1 application circuit boards to one site of the channel multiplex PCB :

- Supports functional testing of the MassCalibration hardware with reference devices.
- Order Code: Z00000-0027 (including application circuit boards + sensor emulation boards, 2 of each version)

Reference example :
703.21 application
circuit board with
sensor simulation
board

Introduction

■ GUI Functionality and Use Cases:

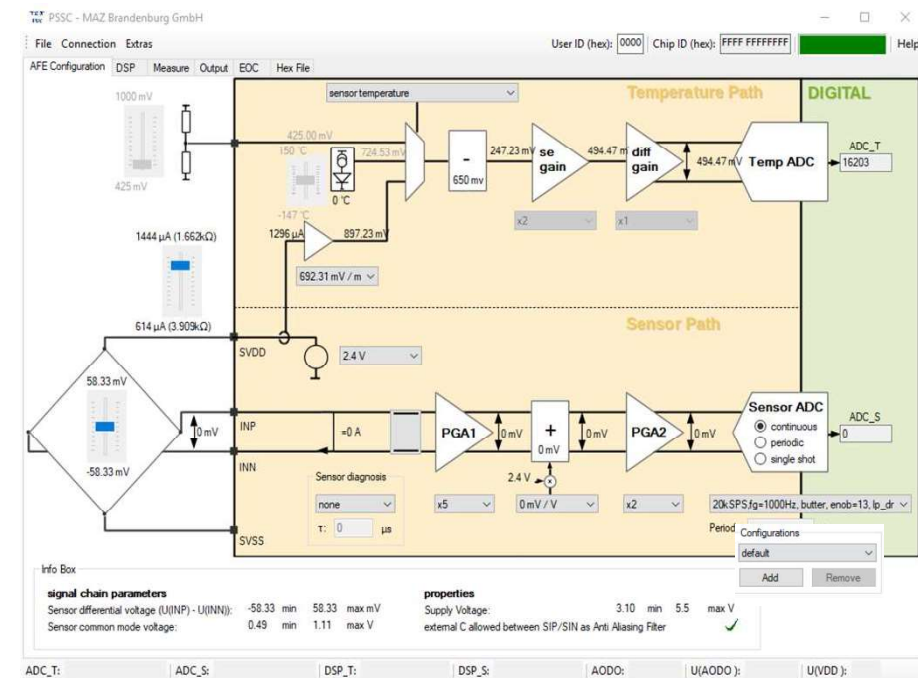

The GUI is used to determine the correct configuration settings of the 703.x1 signal conditioner for a specific application.

The graphical presentation of the main functional blocks guide the user through the configuration process. The GUI consists of three main configuration blocks: analog frontend, digital signal processor and output interface. An additional window allows to configure a digital pin as output of status register signals.

For more details:

- Evaluation kit documentation

703.x1 GUI start window

A futuristic blue sports car is shown from a front-three-quarter perspective, driving on a road that stretches into the distance towards a range of mountains. The car has a sleek, aerodynamic design with prominent headlights and a circular emblem on the front grille. The text "Thank you for your attention!" is overlaid in white on the car's hood.

Thank you for your attention!
